### MESOESTETIC® CLEANSING MILK

#### DESCRIPTION

This enables you to effectively cleanse the surface of your skin, respecting its physiological balance. It totally eliminates make-up and any small impurities, leaving your complexion clean, moist and with a pleasant sensation of well-being.

#### INDICATIONS

A mild cleanser suitable for all types of skin. Vital before the application of the facial Tonic.

#### COMPOSITION (MAIN INGREDIENTS)

- Glycolic Extract of Camomile.
- Alpha-bisabolol.

#### CHARACTERISTICS

- The Alpha-bisabolol content gives this cream an anti-inflammatory action that protects your skin from irritation.
- The essential oils used in its composition give it a high antiseptic and emollient action.

#### APPLICATION

Daily application is recommended, especially at night before going to bed, to facilitate skin cell transpiration.

It should be applied with a light massage, using circular movements with the tips of your fingers, over the entire facial and neck areas. The massage will succeed in

removing all the remains of make-up, powder and dirt from your skin, as well as any small impurities of the skin and the layer of dead cells.

Thoroughly remove the emulsion produced with cotton wool or a make-up removing disk.

Your complexion is now ready for the mesoestetic® Facial Tonic to be applied.

## PRESENTATION

200 ml

Professional Format 500 ml

## MESOESTETIC® FACIAL SOAP

### DESCRIPTION

It cleans the surface of the skin in an effective and pleasant manner, without causing irritation. It perfectly eliminates make-up and skin impurities without altering the skin's lipophile covering, leaving it soft and with sensation of well-being.

### INDICATIONS

A mild cleanser, suitable for all skin types. Essential before applying mesoestetic® Facial Tonic.

### COMPOSITION (MAIN INGREDIENTS)

- Glycerine.
- Lactic acid.

### CHARACTERISTICS

This facial soap has a high skin tolerance, with a skin-compatible PH.

### APPLICATION

Daily application is recommended, especially at night before going to bed, to facilitate skin cells transpiration.

It should be applied with a light massaging action, using circular movements with your finger tips, to your face and the neck. The massage will succeed in removing all the remains of make-up, powder and dirt from the complexion, as well as any small impurities of the skin and the layer of dead cells.

Thoroughly remove the emulsion produced, washing your face with abundant water.

It leaves your complexion ready for the application of mesoestetic® Facial Tonic.

## PRESENTATION

200 ml

Professional Format 500 ml

## MESOESTETIC® FACIAL TÓNIC

### DESCRIPTION

A liquid Tonic for the complexion, for daily application following the removal of make-up and skin cleansing with mesoestetic® Cleansing Milk. It leaves your complexion relaxed and ready for the subsequent application of night creams.

Alcohol-free.

### INDICATIONS

Complement to the daily ritual of cleansing and make-up removal. Suitable for all skin types.

### COMPOSITION (MAIN INGREDIENTS)

- Glycolic cucumber extract
- Rose Water 20 %.

### CHARACTERISTICS

- Glycolic cucumber extract exercises a remarkable de-congestive action that leaves the skin pleasantly relaxed.
- Rose Water helps to prevent the skin from drying out, thanks to its moisturizing action. The absence of alcohol in its composition also avoids any undesirable dehydration.
- Its astringent effect leaves your complexion smooth, smooth and relaxed, preparing and facilitating the skin for absorption of both cosmetic and therapeutic night creams.

### APPLICATION

It should be applied daily, at night, after having thoroughly cleansed your complexion with mesoestetic® Cleansing Milk.

Impregnate a cotton disk with mesoestetic® Facial Tonic and apply to your face and neck repeatedly dabbing it gently all over the surface of the skin. Wait a short time, so that it can be fully absorbed, before applying the night cream.

## MESOESTETIC® HYDRAVITAL FACTOR K

### DESCRIPTION

Nutritious moisturizing Cream for your face and neck. It maintains the smoothness and elasticity of the complexion. Its ingredients are able to restore the hydrolipid film and neutralize the free radicals responsible for premature aging of the skin.

### INDICATIONS

Moisturizing and nutrition of the complexion.

Restoration of the skin's hydrolipid film , vital for maintaining the correct level of moisture in the corneal layer and for ensuring its protection from external aggression.

### COMPOSITION (MAIN INGREDIENTS)

- Hydroviton.
- Vitamin E 3%.
- Amniotic Liquid 10 %.
- Glycerine, Silicon Oil.

### CHARACTERISTICS

- Hyroviton is a complex natural moisturizer composed of a mixture of amino acids, urea, allantoin and sodium lactate that maintains and increases the level of moisture in the skin.

- Vitamin E is a powerful biological anti-oxidant that protects the membranes of the cells. It preserves the vitamin A and the fatty acids essential to oxidation. It has a remarkable lipophile character that helps it to retain the moisture in the skin and to protect it from the environmental aggression. It neutralizes free radicals and therefore helps to prevent the premature aging of the skin.

- Amniotic Liquid is an active biological moisturizer, which is easily absorbed by the skin thanks to its mineral salt content and its trophic biological factors it also has a healing and softening effect.
- Glycerine is an effective moisturizer, whose hygroscopic action slows down the loss of water due to evaporation.
- Silicone Oil is a lipophile component that contributes an effective barrier function which impedes excessive trans-cutaneous water loss.

## APPLICATION

mesoestetic® Hydra-vital factor K is applied to your face and the neck with a light massaging action, using circular movements.

It should be used twice-daily, in the morning and at night, following the cleansing and toning of your complexion (mesoestetic® Cleansing Milk and mesoestetic® Facial Tonic). It is immediately absorbed, leaving neither greasiness nor shine.

Following its application there is a pleasant sensation of coolness and well-being of the skin.

It is ideal as a base for subsequent make-up.

It is an indispensable supplement for the Cosmelan® de-pigmentation method.

## PRESENTATION

Professional Format 500 ml

## MESOESTETIC® PURIFYING GLYCOGEL

### DESCRIPTION

A repairing and revitalizing Gel for skins that are “suffocated” and lacking vitality.

It has an immediate regenerating effect on the skin, as it accelerates the loss of the dead skin cells.

It stimulates renovation and cellular metabolism and it enables the skin to recover its water-retaining function.

It has a mild peeling effect.

### INDICATIONS

Use in cases of:

- Rough and dry skin (hyperkeratosis).

- Loss of flexibility and stability of the skin tissue of your face (mixed-oily complexion).
- Excessive secretion of sebum and to prevent the appearance of black heads.
- Solar erythemas (actinic hyperkeratosis).
- To prevent aging and photo-aging of the skin.
- Follow-up in skins with a tendency towards being oily or hyperkeratosis and as a complement in treatments combined with chemical peelings.

#### COMPOSITION (MAIN INGREDIENTS)

- Glycolic Acid 8%.
- Vegetable Extract Complex 5%.

#### CHARACTERISTICS

- Glycolic acid is an Alpha-hydroxiacids that causes good cell renewal and eliminates superficial corneocytes. It makes the skin more acidic and has a remarkable ability to penetrate into the corneal layer. All this means that its cosmetic effects are to improve skin that is "suffocated" and lacking vitality and that it increases its moisture content and flexibility. The result is a luminous, healthy and velvet-like skin.
- The Vegetable Extract Complex increases the level of moisture in the skin over long periods of time, it reduces the effects of solar erythema and it controls the secretion of sebum, improving the look of dehydrated skin that lacks vitality, making it smoother and more homogenous.

#### APPLICATION

mesoestetic® Purifying Glycogel should be used twice a day, morning and night, on dry clean skin.

It should be applied to your face with a gentle massaging action until the gel has been completely absorbed. Make-up and touch-up powders can be used.

Avoid contact with eyes

#### PRESENTATION

50 ml

MESOESTETIC® ANTI-AGING CONTROL

## DESCRIPTION

mesoestetic® Anti-aging control performs the action of blocking the metabolic mechanisms in the skin responsible for the aesthetic alterations characteristic of senility, slowing down the start of the oxidising processes, kidnapping free radicals and thus impeding the peroxidation of cutaneous lipids and the oxidation of proteins.

Its formula, with a silicon base, is suitable for senile skin, which is often discoloured

It is a moisturizing and nutritious cream for the ageing neck and face.

It prevents the appearance of expression wrinkles and attenuates those already present on your face and neck.

Excellent dermal tolerance and results, both in pre and post surgery applications.

## INDICATIONS

Treatment and prevention of the skin aging.

Skin conditions associated with dryness.

Excellent dermal tolerance and good results when used both pre and post surgery (gold threads, peelings, etc.)

## COMPOSITION (MAIN INGREDIENTS)

- Proteoglycans 5%.
- Avocado Oil 3%.
- Alantoin.
- Hydroviton.

## CHARACTERISTICS

- Proteoglycans artificially reproduce the composition of the essential elements of the skin (such as: collagen, mucopolysacarides and glycosaminoglycans). They stimulate the metabolism of the conjunctive tissue. They improve its biochemical parameters and cause an increment in the level of soluble collagen. The hyaluronic acid content crosses the skin barrier and improves the moisture content and flexibility of the skin. It increases the elasticity of the peri-vascular tissue and it improves the blood flow, reducing oedemas.

- Avocado Oil, thanks to its eudermic, emollient and regenerative action on the conjunctive tissue, increases the proteins (proteases), collagen tissue and leucine, which leads to remarkable modifications to the metabolism of the conjunctive tissue.

It is of great use in the treatment of degenerative skin processes, especially aging and hyperkeratosis.

- Hyroviton is a complex natural moisturizer composed of a mixture of amino acids, sodium lactate, urea and allantoin, which has a major regulating action on the levels of skin moisture.

## APPLICATION

mesoestetic® Anti-aging Control should be used in the morning and at night, on your face, neck and neckline.

It should be applied using a gentle massaging action, particularly in the most affected areas, until the cream has been completely absorbed.

## PRESENTATION

50 ml

## MESOESTETIC® REGENERATING GEL

### DESCRIPTION

mesoestetic® Regenerating Gel, which is a powerful revitalising gel, restores the damaged tissues, increasing cellular multiplication.

It protects the skin well before a problem surfaces, moisturizing and feeding at depth, thanks to its regenerative and anti-wrinkle properties.

The film of protective proteins produced, helps to protect the skin against all types of aggression, and from any oedematous process, mesoestetic® Regenerative Gel becomes the ideal complement for a complete recovery.

### INDICATIONS

Regenerative and healing properties.

It slows down the formation of wrinkles and provides elasticity, returning the lost softness and smoothness to the skin.

It activates cellular respiration.

It is suitable for sensitive skins, thanks to the mild action and effectiveness of the components

### COMPOSITION (MAIN INGREDIENTS)

- Collagen 2%.
- Vegetable Placenta 1%.
- Lecithin.
- Glucosamin.
- Elastin.

## CHARACTERISTICS

- Collagen has anti-oedematous, moisturizing and anti-wrinkle effects, in addition to providing a natural protection. It also improves the dermatological affinity of topically applied products, especially suitable for delicate and sensitive skins.
- The Extract of Vegetable Placenta activates cellular transpiration, is a good healer and it is a basic ingredient in all regenerative formulas.
- Lecithin has an emollient and protective moisturizing capacity due to its phospholipid content. These regenerate the corneal layer for their ordination in dual layers, to form part of the cement-like substance that fills the spaces between the corneocytes.
- Glucosamin is a biological product that acts as a diffusion factor.
- Elastin is a fibrous protein of the conjunctive tissue, which contains peptides that reach the dermis and activate the metabolism secretor of the fibroblast. It also has moisturizing and film producing properties, which enable them to be used as tensors of the surface and re-structuring protector of the skin.

## APPLICATION

Once a day, apply a small quantity of mesoestetic® regenerating gel to the part to be treated, using a gentle massaging action until it has been totally absorbed.

For a correct cosmetic treatment, daily application is recommended. Due to its being readily absorbed, made up can be applied immediately.

## PRESENTATION

50 ml

## MESOESTETIC® FACE MASK 1 AND 2

### FACE MASK 1 MOISTURIZING AND REVITALIZING MASK

When the natural moisturizing and lubrication mechanisms fail or become insufficient due to environmental aggression or the passage of time, your skin gets

dry. This is noticeable due to the sensation of tightness and pruritus; your skin becomes rough, flakey and irritated.

Normal skin is covered with the O/W type (oleo-water) hydrolipid film or film also known as epidermal-cutaneous emulsion. This is formed from the water from transpiration, perspiration and of the oleaginous components of sebum. The hydrolipid film regulates the moisture in the skin and protects the skin from external forces. The variations in this physiological component of the skin determine its softness, flexibility and moisture. Dry skins types are characterized by a deficit in the production of lipids in the sebum that indirectly, due to the alteration of the hydrolipid film, leads to the loss of water or dehydration. This type of skin problem is due to the hot or cold conditions of the air, which contribute to the loss of water by the corneal layer and lead to dry skin. Also the cold and the excessive use of soaps and detergents contribute to reducing the quantity of sebum charged with retaining the water from perspiration, and break the balance that the hydrolipid film had provided. In both cases one should carry out a cosmetic moisturizing and revitalizing treatment to the skin that leads to the physiological restoration of the epidermal-cutaneous film.

A moist and intact skin looks young, smooth, flexible and is soft to touch, as a good appearance is directly related to the degree of moisture in the corneal layer.

The FACE MASK 1 facial mask is a product of a careful formulation so that its cosmetic ingredients produce a moisturizing and energetic revitalizing action in all types of dry skins. The moisturizing and revitalizing processes occur due to it coming into contact with the corneal layer, leading to it being moisturized directly, a phenomenon due to the penetration of some of the ingredients that reach the deepest layers in the epidermis and even a phenomenon of selective absorption that acts on the most intimate layers of the skin, stimulating the regeneration processes.

The lipid components that Face Mask 1 distributes well over the skin are emollients and improve its elasticity. They leave a fine protective film on the skin, which helps the moisturizing process thanks to its weak occlusion phenomenon

Face Mask 1 also contains carefully selected moisturizing agents to provide a potent and long lasting moisturizing effect.

## COSMETIC MOISTURIZER

Moisturizing the skin is one of the most traditional functions required from cosmetic products.

A dry skin is one that contains less than 13% of its weight in water in its corneal layer. Therefore, every effort is aimed at maintaining and increasing that superficial moisture level.

## THE NEED FOR A CORRECT LEVEL OF MOISTURE

For years, a perhaps excessive role has been given to the superficial lipids that come from sebum and that cover the surface of the skin. The film of lipids that

forms has been considered a decisive factor in the maintenance of an appropriate level of moisture in the corneal layer. These sebaceous lipids almost always form an emulsion with the water and the metabolites that come from sweaty secretions, which is why an emulsion has been considered the most suitable type of cosmetic for moisturizing products.

The evident advantages of moistening the skin with an external aqueous emulsion, from which the evaporation of the water adds a pleasant sensation of coolness, justify the fact that even the most accepted cosmetics for moisturizing the skin are currently liquid emulsions O/W- oils in water -.

Where it becomes more necessary to maintain an appropriate degree of moisture is on your face and neck, since these are the parts of the body most affected by aggressive external drying agents.

However, you must distinguish between wetting and moisturizing. A classic wetting agent is glycerine, which, being hygroscopic, retains the water on the surface of the skin. But it is not good enough, as it does not manage to moisturize, that is to say, to get water to reach the corneal layer.

To achieve sufficient moisturizing, complex agents such as HIDROVITON must be used, this has a similar composition to that of the hydrolipid film or as it is also known as NMF or Natural Moisturizing Factor,

Other important components of an appropriate formulation for combating dry skin are:

- SILICONE OIL due to its barrier effect, thus diminishing the loss of water from the interior of the epidermis. It acts as natural moisturizer as it retains water within the corneal layer, thus helping to prevent the loss of elasticity in the skin.
- VITAMIN E or tocopheryl acetate is a well-known natural reducer that acts as an anti-oxidant. It combats skin aging by blocking the oxidation of the lipids that make up the cellular membrane, as well as aggression by harmful solar rays. It contributes to the elimination of free radicals and synergizes the action of ascorbic acid or vitamin C, a fundamental element in the synthesis of collagen
- VITAMIN C plays an important part in the synthesis of collagen by means of the activation of complex enzymatic systems. In addition, it has an anti-radical action, neutralizing the free radicals implicated in the aging process.
- DNA, due to its restorative qualities on proteins, protects the dermal conjunctive tissue from solar aggression, oxidative stress and other adverse environmental factors, amongst which is tobacco. This agent is well known to be useful in fighting premature aging or aging which is aggravated by these environmental factors.
- Ac. HYALURONIC is physiologically present in young skin and is produced by the fibroblasts. It has a potent moisturizing action that is able to cross the cutaneous barrier and improve the moisture and flexibility of the skin, as

well as to increase the elasticity of the perivascular tissue and improve the blood flow, reducing any inflammatory reactions.

- d – PANTENOL, also known as pro-vitamin B5, penetrates in the strata of the skin, which it simultaneously feeds and moisturizes; it improves the look of dry and rough skins.

#### Function

Face Mask 1 moisturizes, revitalizes and feeds the skin of your face and neck. It provides your complexion with splendour, elasticity, softness and freshness. It restores the hydrolipid film and the lipids in the skin. Suitable for all skin types

By using this moisturizing revitalizing mask, you can preserve the optimum level of moisture in your skin, as a protective film is formed, which impedes evaporation and helps the corneal layer to retain water. It simultaneously delivers vitamins to the deepest layers of the epidermis, which stimulate cellular activity and succeed in combating the signs of premature aging, leaving the skin moist, softer and with a more luminous tone.

#### Instruction for use

Apply a uniform layer over a very well cleaned face and neck, avoiding the contour of the eyes. Leave to act for 10 to 15 minutes, after which all the surplus should be removed with a tissue

#### Presentation and Contents

Tube of 200 ml

## FACE MASK 2

A Facial mask that acts as a decongestant and combats stress

Face Mask 2 is a beauty-treatment mask that acts on the skin of your face and neck as a decongestant and combats stress.

Facial masks are cosmetics that perform a physical action on the skin of your face and neck due to their specific nature of application. The evaporation process that occurs while they are being applied causes a tensing action.

Simultaneously, they perform biological functions dependant on the active cosmetic components used in their formulation.

The skin of your face and neck, in addition to cleanliness and hygiene, requires care and protection as it is the part of the epidermis most exposed to environmental factors and the passage of time.

The aim of this special care is to repair and prevent any damage produced by repeated aggressions, which manifests itself in irritation, facial erythema,

telangiectasia or erythema, or other unsightly skin problems that may be more or less visible and that are a consequence of contact with harmful external forces, such as irritating chemicals, environmental pollution, or even exposure to sources of heat or abrupt changes of temperature, amongst others.

In these cases one should use a reparative cosmetic treatment for the epidermis, to eliminate these skin imperfections.

FACE MASK 2 is fruit of a careful formulation, so that the action of its cosmetic ingredients are emollient, epitelizant, decongestant, as a relaxing tonic and anti-stress, which works on all skin types in which the above imperfections have been detected. With this objective in mind, a series of classic active ingredients of known use as modern molecules, obtained by means of genetic engineering starting with galactose chains and glucuronic acid.

The reparative cosmetic process takes place by means of a direct contact with the corneal layer that leads to direct repair and with a phenomenal penetration by some ingredients that are able to reach the deepest layers of the epidermis and even have a selective phenomenon of absorption, which acts on the most intimate layers of the skin, stimulating the regeneration processes.

The lipid components that Face Mask 2 distributes well over the skin, are emollients and improve its elasticity, adding unsaturated fatty acids such as linoleic acid. They leave a fine protective film on the skin, which helps maintain its natural moisture. These are in the form of an O/W (oil/water) emulsion to aid the process of direct contact with the dermis.

Face Mask 2 also contains carefully selected decongestant and relaxant agents to provide a potent and long lasting reparative effect.

- Barbados Aloe is known to be an active anti-inflammatory and is a protector that is indicated in the treatment of eczema and skin irritations, burns, acne.....

- Sunflower oil contains some major polyunsaturated fatty acids, such as the oleic acid, linoleic acid, palmitic acid and stearic acid. It is highly emollient and widely used for the treatment of dehydration, dry skin and burns.

- Extract of calendula officinalis contains various components such as flavanoides, saponin, triterpene and mucilaginous polysaccharide. This extract has been scientifically demonstrated to have healing properties because it aids the granulation and epitelization of the damaged skin. It also stimulates the biosynthesis of glucoproteins, nucleoproteins and of the collagen. It controls exfoliation.

- CAMOMILE EXTRACT has two active ingredients that are widely used in dermatological processes, camomile oil and bisabolol, whose effects are re-epitelizant, antiseptic, etc.

- RHAMNOSOFT has been incorporated in the formula as it is a modern agent of natural origin, whose action modulates skin inflammation. It is worth highlighting that, contrary to classic anti-inflammatory agents, this active ingredient is able to

reduce the reactivity of the skin but without suppressing its physiological defence capacity, due to which, it is especially recommended for fragile skins and for sensitive or damaged skins.

#### Function

Face Mask 2 decongests, s relaxes, tones, regenerates and feeds the skin of your face and neck. It provides your complexion with splendour, elasticity, softness and freshness.

Suitable for all skin types.

By using the decongestive-anti-stress mask, one is able to control the beneficial exfoliating process that is required from the application of peelings, anti-aging methods such as Mesoéclat or de-pigmenting treatments such as Cosmelan. The sensation of tightness or of small wrinkles due to the peeling off of the dead layers of skin cells ("tanned by the keratin") is minimized and the most effective use of daily cosmetics (such as Radiance eye contour... ) is effected

The small skin flakes that are removed stick to the mask and come off easily without problems, leading to a feeling of relaxation in the skin.

#### Instruction for use

Apply a thick and uniform layer over the skin of your face and neck, which have been subjected to prior treatments. Avoid the contours of the eyes and mucosa. Leave to act for 15 minutes. Remove the surplus with a tissue.

If exfoliating and/or de-pigmenting treatments have been used, Apply as of the 2<sup>nd</sup> or 3<sup>rd</sup> day. The frequency of application may be increased if the symptoms of skin irritation persist.

In skins with aesthetic imperfections apply twice a week.

200 ml Tube

### MESOESTETIC® FACE MASK 3

#### FACE MASK 3

#### FACIAL MASK WITH A PURIFYING AND EXFOLIATING ACTION

Normal skin is covered with the O/W type (oleo-water) hydrolipid film or film also known as epi-cutaneous emulsion. This is formed from the water from transpiration, perspiration and of the oleaginous components of sebum. The hydrolipid film regulates the moisture in the skin and protects the skin from external forces. The variations in this physiological component of the skin determine its softness, flexibility and moisture. The excessive secretion of sebum leads to the production of oily skins, with tendency towards spots.

Facial masks are cosmetics that perform a physical action on the skin of your face and neck due to their specific nature of application. The evaporation process that occurs while they are being applied causes a tensing action. Due to its isolated action, it evokes a certain degree of heat in the skin, which aids its vasodilatation and sweating, thus aiding drainage via the pilosebaceous follicles and eliminated any dead cells, impurities, dirt and sebum that has accumulated on the skin. Simultaneously, they perform biological functions dependant on the active cosmetic components used in their formulation.

## DESCRIPTION

Face Mask 2 is a beauty-treatment mask, a carefully formulated product, designed to purify and revitalize the skin of your face and neck. It is suitable for all skin types with a tendency to greasiness or seborrhea, mixed or with a tendency towards spots. It has a mild exfoliating action that aids the skin's cellular renewal.

The revitalizing action is aided by a weak mechanical exfoliating effect, due to the solid particles contained in the mask. While removing the mask, these have the function of removing, by mechanical haulage, the superficial flaky cells.

Face Mask 3 components spread well over the skin to regulate the sebum and cleanse it, avoiding any accumulation of sebum on the skin surface. It is an O/W emulsion, which favourably aids the cleansing process of the skin's surface.

Following its correct application on your face and neck, the mask leaves your skin smooth and soft to touch, with a uniform texture and with no oily -type shine.

## COMPONENTS

Melaleuca alternifolia oil, also known as the Australian tea tree, is obtained by distilling its leaves in a current of water vapour. It is a product that is totally of vegetable origin. This oil has antibacterial and anti-fungal properties, and it exhibits interesting beneficial properties for the skin, as it stimulates the physiological reparative processes. It is neither toxic nor irritating.

Burdock extract has antiseborrheic and anti-pruritis properties when it is used topically. Due to its high polyphenol content, it has antibacterial, anti-fungal and anti-oxidant properties.

Virginian Hamamelis (Witch Hazel) extract has a toning, vessel-protective and astringent action on the skin, basically due to its high content in Gallic tannins and galic acid.

The polyethylene acts as a mechanical exfoliating element.

The mentyl lactate gives the mask a continuous refreshing effect.

Hectorite is a sodium silicate, lithium and magnesium prepared as nanoparticles; it provides the appropriate pseudo-plastic properties to the mask, aiding its application. It acts as a fixing element for the functional ingredients of the mask. It adds to the physical absorption of excessive cutaneous sebum.

## FUNCTION

Face Mask 3 purifies the skin and regulates the sebum. It has a mild exfoliating action that aids cellular renewal. It prevents the appearance of dermal impurities and encrusted pores, due to its dermal cleansing action. It is suitable for skins that are oily, mixed or with a tendency towards spots.

## APPLICATION

Apply a thick and uniform layer to a thoroughly clean face and neck. Avoid the contours of the eyes and mucosa. Leave to act for 10 minutes. Remove with tepid water, using a circular massaging action.

On oily skins, apply 2 or 3 times per week.

On mixed or sensitive skins, apply once a week.

## CONTENTS

100 ml

## **BODY PRODUCTS**

### MESOESTETIC® BODY MILK WITH A-HYDROXIÁCIDIS

#### DESCRIPTION

This smooth liquid emulsion may be used all over your body. It moisturizes and protects your skin to maintain its natural, hydrolipid film. It makes your skin cool and soft after every daily shower.

It has a gentle peeling effect that aids in an effective renewal of the skin cells.

Mesoesthetic® Body Milk with a-hydroxiacids ensures that the skin is correctly moist, protects your face from environmental factors and makes one look healthy.

#### INDICATIONS

Makes the skin of the body flexible and soft.

Moisturizes, nourishes and restructures the epidermis.

Suitable for all skin types, even the most delicate.

## COMPOSITION (MAIN INGREDIENTS)

- Alpha-hydroxiacids.
- "Vitamin" F.
- Glycerine.

## Characteristics

- The a-hydroxiacids present in its composition regulate and restructure the hydrolipid film of the skin. They preserve its protective acidic pH against micro-organisms.
- The "Vitamin" F, with gamma-linolenic, linoleic and arachidonic acids, makes up the emollient and softening content of natural origin.
- Glycerine is the hygroscopic substance that regulates the correct level of moisture in the skin.

## APPLICATION

It should be used daily, after the morning or evening shower.

Dry the skin carefully and spread a light layer of mesoestetic® Body Milk with a-hydroxiacids gently massaging it all over the body. Particularly use on the most damaged areas.

It is immediately absorbed, leaving no traces.

Its application results in a pleasant feeling of coolness and softness over the whole body.

## PRESENTATION

200 ml

## MESOESTETIC® EXFOLIATING SHOWER GEL

### DESCRIPTION

A gel that activates the cellular renewal to protect the hydrolipid film and guarantee smooth skin.

It has a mild action on the dead skin cells, eliminating them and freeing the pores of impurities.

It maintains the pH of the skin.  
It is of excellent dermatological quality.

## INDICATIONS

Daily cleansing of the skin.

Increases the effectiveness of treatment products.

Suitable for all skin types.

## COMPOSITION (MAIN INGREDIENTS)

- Apricot seeds.
- Moisturizing Cleansing base.

## Characteristics

- Its complete formula respects the protective hydrolipid film of the skin. It is a dermo-compatible soap that does not eliminate lipids from the skin nor does de-naturalize proteins.
- The texture of the gel contains natural spherical micro-particles that gently remove impurities from the skin, also removing the traces of old cells, eliminating them and freeing the pores of impurities that hinder their normal functioning.

## APPLICATION

Spread the gel in circles onto damp skin.

Use on those areas that suffer most, including elbows and knees, as these are the areas with the higher proportion of keratin cells.

Rinse with plenty of tepid water.

The resultant smooth, soft skin will be observed immediately.

## PRESENTATION

200 ml

## MESOESTETIC® ANTI-FLACCIDITY RE-FIRMING GEL

## DESCRIPTION

Flaccidity is a skin problem frequently found in older skin and it occurs both in skin that is not covered and subjected to solar radiation and atmospheric elements and in those areas that are generally protected by clothing.

Flaccidity is caused by a series of morphological and physiological changes within the structures of the skin: there is a decrease in the fibres of soluble collagen and an enlargement of those of insoluble collagen; a decrease in muco-polysaccharide acids and also a decrease in elastin fibres. This triple dermal failure leaves the epidermis disconnected from its upper layers, consequently, the skin loses elasticity and stability and tends to hang, leading to skin flaccidity: “bags” under the eyes, abdomen following childbirth, breasts after nursing, etc.

The use of mesoestetic® anti-flaccidity Re-firming Gel strengthens the structure of the skin and prevents the break-down of its conjunctive tissue.

A liquid gel with a continuous, very penetrating action, which helps the skin to maintain and to recover its elasticity and fullness.

Excellent skin tolerance.

## INDICATIONS

It has a strengthening and preventative action on the consistency of the skin.

It prevents the relaxation of dermal tissue.

It is useful in skin which has been damaged by the sun.

It is of great use following childbirth and nursing, in the prevention of abdominal and breast flaccidity.

It is indispensable in combating skin flaccidity following abrupt weight loss.

Its use is also recommended for young people, to prevent the deterioration of skin elasticity.

## COMPOSITION (MAIN INGREDIENTS)

- Borage Oil.
- Amniotic fluid 6%
- muco-polysaccharide
- Ginseng Extract 2%.
- Tensors 2%.

## Characteristics

- Borage Oil. This oil has a high content of gamma-linolenic acid (over 20%), which is beneficial to the blood micro-circulation and the skin's physical resistance. It ensures a smooth and moist skin due to its effect of promoting cellular renewal and the maintenance of the phospho-lipid balance

Its liposome formulation ensures a perfect penetration of the layers of the skin.

- Amniotic fluid. A biological component, whose mineral salts, amino acids, urea, sugars and proteolytic enzymes all give it an extraordinary moisturizing, tensing and healing action.

- Muco-polysaccharide. These are part of the fundamental substance of the conjunctive tissue that occupies the spaces between the fibres. Its presence in the formula has a reparative and revitalizing action on the skin, helping to improve its look.

- Ginseng Extract. This brings to the skin its high content in vitamins A, B, C, D and F. It has excellent toning properties and helps to counteract free radicals.

## APPLICATION

Use daily, following shower or bath, for periods of no less than one month.

Spread a generous quantity of gel over the areas of the body where an increase of flexibility and stability is required.

To apply with an upward circular massaging motion, until it has been completely absorbed.

## PRESENTATION

## MESOESTETIC® ANTI-CELLULITE CREAM-GEL

### DESCRIPTION

mesoestetic® anti-cellulite Cream-gel is a long-lasting liquid gel, especially designed for being massaged slowly into the nodular areas of cellulite, and it has an excellent local tolerance.

It can achieve the reduction of oily nodules in the adipose tissue and the elimination of the excess liquids and toxins responsible for skin numbness and the "orange skin" characteristic of hard cellulitis.

Its use results in a firm, flexible and smooth skin, with a remarkable reduction of local volume.

## INDICATIONS

Dermal-cosmetic treatment of all types of cellulitis during any stage of its development, both in the initial or incipient stages, such as in established cellulitis.

Soft or flaccid cellulitis. Cellulitis with hard nodules.

Especially suitable for the treatment of thighs, buttocks, hips and arms.

## COMPOSITION (MAIN INGREDIENTS)

- Iodotrate
- Indian Chestnut Extract 3%.
- Equisetum Extract 3%.
- Fucus Extract 3%.
- Caffeine 3%.

### Characteristics

- Iodotrate. This is a derivate of iodine synthesis. It contains organic iodine. It directly stimulates the metabolic activity of adipose cells, without hormonal stimulation, and it stimulates their capacity to eliminate fat. It is non-toxic and it causes neither local sensitivity nor irritation.

- Indian chestnut extract. This protects and strengthens the local blood capillaries and given its anti-inflammatory action, reduces cellulitic oedemas.

- Equisetum Extract. This has an elevated ability to re-mineralize due to its abundant content in silica salts. Thanks to the diffusion of the soluble fraction of its silica content, it improves and increases the elasticity of the tissues and positively stimulates the formation of collagen. It has a major lipolitic action.

- Caffeine. This inhibits phosphodiesterase, the enzyme responsible for the breakdown of cyclic AMP, a fundamental element in the maintenance of physiological eliminating fats. It mobilizes lipids through an enzymatic breakdown of triglycerides.

## APPLICATION

mesoestetic® anti-cellulite Cream-gel should be used daily for a minimum period of one month.

It is recommended to apply it following a shower alternating cold and hot water, during which mesoestetic® exfoliating Gel has been used to remove any dead cells and to activate the circulation.

Follow this by applying the gel to the affected areas, massaging in an upward direction until the cream-gel has been completely absorbed.

It is important to bear in mind that the massage must be carried out over a long period, but in a gentle manner and in an upward direction, so as to activate the return circulation and to encourage lymphatic drainage that will remove the fat that has been mobilized by the application of the product.

It can be used simultaneously with positive cyclic pressure therapy or after having carried out manual lymph drainage.

Professional Format 500 ml

## MESOESTETIC® REDUCING GEL

### DESCRIPTION

The treatment of localized obesity is the same as that which should be used when treating general obesity. The treatment must act on the skin metabolism using mechanisms to increase the breakdown and mobilization of the fatty accumulations for their elimination and, at the same time, works on those that reduce the formation of new reserve triglycerides (lipogenesis).

One must, therefore, reduce one's intake of calories (a controlled diet), increase the body's consumption of fats (physical exercise that mobilizes the affected areas) and, above all, apply local massage with a Reducing Gel, which efficiently breaks down the localized accumulations of fats.

mesoestetic® Reducing Gel with caffeine promotes the metabolic activity of the lipocytes, reduces the fluid accumulations in the interstitial spaces and increases capillary resistance. The consequence of these actions is a decrease of the size and volume of the treated area, and an improvement in the appearance of the skin. The results are clearly visible after 20 days of treatment.

### INDICATIONS

Local shaping of problematic body areas.

Treatment and elimination of localized accumulations of fat (abdomen, thighs, hips, buttocks and arms). Prevents the appearance of new accumulations.

### COMPOSITION (MAIN INGREDIENTS)

- Iodothrate
- Hyaluronidase

- Indian Chestnut Extract 3%.
- Centella asiatica extract
- Muco-polysaccharide
- Caffeine 5%.

## Characteristics

- Iodotrate. Iodized organic amino acid which is purified by re-crystallization, of low molecular weight and it increases the metabolic activity of the lipocytes. It has no hormonal action of stimulation and it causes no toxic reactions with enzymes on the skin.
- Hyaluronidase. This is a hydrolytic enzyme of muco-polysaccharide, of hyaluronic acid type. It reduces the viscosity and aids a greater diffusion and absorption of the fluids through the interstitial spaces. It also de-polymerizes the chondroitin sulfate acid, with which it increases the diffusing action of the principle ingredients. It helps to eliminate the bags of fluid within the skin.
- Indian chestnut extract. This is a natural substance with a high content in escin (triterpene saponins), flavanoids and vitamins from the B, K and C groups. It gives the formulation its vasoconstrictor and anti-oedema properties.
- Centella asiatica extract. Its active ingredients, flavanoids and essential oil, give it epithelializing and vessel protective abilities. It increases capillary resistance and acts as a bio-stimulant.

Thoroughly clean the area to be treated, using mesoestetic® exfoliating shower Gel.

Apply the gel to the problematic area (abdomen, hips, thighs, buttocks or arms).

Massage gently, using an upward circular motion circulate until the gel has been completely absorbed.

The treatment should be applied daily for a minimum of one month.

## MESOESTETIC® SILICON AND MELILOTO GEL

## DESCRIPTION

Sedentary habits and work that requires one to remain sitting down or on foot for many hours are becoming more and more frequent. Most of these people suffer from swelling, pins and needles and loss of sensation in their legs and tired feet. These problems are caused by a problem in the venous return of the blood and from bad coetaneous circulation that leads to the accumulation of liquid in the interstitial spaces (oedema) and causes, due to local dilation, the appearance of pain and swelling.

mesoestetic® Silicon and Meliloto gel promotes the peripheral return circulation and reduces and calms the structures of the affected conjunctive tissue, which therefore helps to reduce the sensation of fatigue and heaviness of the extremities. Its effective formulation also results in a moist and flexible skin that leaves one with a pleasant feeling of having rested and coolness.

## INDICATIONS

Tired legs and feet.

Swelling and pain of the lower limbs.

Faulty coetaneous circulation.

Work which involves prolonged periods in the same position, whether sitting or standing (hairdressers, waiters, nurses, computer users, workers in production chains, etc...).

## COMPOSITION (MAIN INGREDIENTS)

- Meliloto extract.
- Organic silicon.

## Characteristics

- Meliloto extract. Its principles ingredients make it a vessel protector, a vein tonic and help it to activate the lymphatic system, while it also has relaxing and anti-inflammatory properties. It promotes the peripheral return circulation, decongesting oedema and swollen legs.

- Organic silicon. This has a stabilizing role on the conjunctive tissue. Its presence aids the interaction between the fibrous proteins and glycosaminoglycan, which protects the functionality of the sub-cellular dermal components. The incorporation of silicon in the formula helps to normalize the conjunctive tissue, since its absence leads to an excessive formation of transverse connections between the collagen fibres and, therefore, an alteration in its functional capacity.

The interaction of both components achieves an appropriate level of hydration, toning and decongestion in tired legs, leaving the skin feeling cared for and flexible and with a comfortable sensation of having rested and coolness.

## APPLICATION

This can be used at any time during the day and as frequently as required.

Apply a layer of gel to the feet, ankles and legs of both limbs, then gently massage in an upwards direction, alternating with both hands, from the foot to the area of the upper thigh.

To improve the symptoms, it is recommended that following the application of mesoestetic® Silicon and Meliloto gel, both legs should rest, in a position slightly higher than the rest of the body.

This can be used jointly with Phytoactiv Vials associated with positive cyclic pressure therapy and/or manual lymph drainage.

## PRESENTATION

50 ml

## MESOESTETIC® ANTI-STRETCH MARK CREAM

### DESCRIPTION

A cosmetic treatment with a high content of active ingredients to restructure skin altered by stretch marks of any origin.

This prevents and corrects the appearance of stretch marks, while increasing the trophic regenerating and stimulating activity of the matrix of collagen and elastin of the dermal connective tissue. It re-equalizes the skin thanks to its bio-activating, moisturizing, healing and microvascular protecting effects. It maintains the elastic properties and supplies nutritious elements for the repair of de-structured or torn connective tissue, a characteristic of stretch marks of any origin. With its prolonged use it is possible to improve the colour of the skin with stretch marks and to increase its thickness and elasticity. The cosmetic results are quicker and more obvious, when correcting stretch marks of a reddish colour, than those that are of a pearly colour.

### INDICATIONS

The prevention and correction of stretch marks of any cause. Its effectiveness is greater in the correction of rose-coloured stretch marks, or those that have recently appeared. With pearly-coloured stretch marks, the results are slower to show

themselves. The anti-stretch mark cream can be used to prevent the appearance of stretch marks, along with massages, hydro-massages or bathing therapy.

## COMPOSITION (MAIN INGREDIENTS)

- Ascorbic acid, hydroxyproline, Centella asiatica extract, organic silicon, mimosa tenuiflora extract, hydrolyzed collagen, Hydrolyzed elastin, equisetum arvensis Extract, deanol, borage oil, vitamin E, vitamin A, squalan, bisabolol, methylsilanol hydroxyproline aspartate

## Characteristics

- It has a complex and harmonic reparative and healing action on the skin due to the multiple actions of its active ingredients:

- Ascorbic acid: Applied topically, this has a potent stimulating action on the biosynthesis of collagen of type I and III in human fibroblasts; during the biosynthesis of elastin and collagen, it intervenes in the hydroxylation of the proline, a critical step in the formation of hydroxyproline, a structural amino acid of elastin, collagen and proteins with high collagen content. The ascorbic acid stimulates the biosynthesis of fibroblasts produced by aged human skins at levels that are functionally those of the fibroblasts of young skin. It is an effective neutralizing agent of free radicals.

- Hydroxyproline: This is essential in the biosynthesis of collagen. The topical addition of hydroxyproline aids the restructuring of the collagen and elastin fibres damaged by the stretch marks, because it is a structural element of these fibrous proteins.

- Centella asiatica extract: The properties of this are healing, epitelizant, vessel protective, anti-inflammatory and it bio-stimulates protein synthesis. This last anabolizing agent is very useful to promote the restoration of the altered fibre-elastic structure that is the underlying problem in the skin problem of stretch marks, however they have been caused.

- Organic silicon: This is a water soluble derivative of silicon. Silicon is a structural element of the conjunctive tissue and it plays its part in fundamental macro molecules such as elastin, collagen, proteoglycan and other structural glycol-proteins. When stimulating the function of the fibroblasts, it promotes the biosynthesis of collagen and elastic fibres.

- Mimosa tenuiflora extract: This has astringent and above all, healing properties, through a stimulation of the true "stem cell" fibroblasts of the conjunctive tissue

- Hydrolyzed Collagen: This is a major source of polypeptides with a low molecular weight and structural amino acids of collagen such as proline and hydroxyproline, which are necessary biochemical elements in the production of collagen. It is a

moisturizing agent that promotes the restructuring of the lipid film of the skin, especially of the part with stretch marks.

- Hydrolyzed elastin: This is a major source of polypeptides and structural amino acids of the elastic protein, elastin, whose regeneration is important in the healing tissue of stretch marks. A moisturizing agent.

- Equisetum arvensis Extract: This has are-mineralizing action due to adding inorganic and organic silicon. It has properties which regulate the elasticity of the tissues. It is astringent and re-firming.

- Deanol: This is a tensing agent that reduces wrinkles and increases the elasticity of the skin because it has very specific re-firming properties.

- Borage Oil: This contains over 40% unsaturated fatty acids, which are essential in the lipidic metabolism of the skin. This is an emollient and contains trophic elements, which are essential for the skin.

- Vitamin E: This is an anti-oxidant par excellence and it prevents the oxidation of the cellular membranes. It stabilizes the structural lipids that are susceptible to oxidation. It stimulates the scaring process. It has an emollient effect due to its lipophilic nature.

- Vitamin A: This is involved in the process of cell division and differentiation, stimulating the renovation of the basal cell layer of the epidermis, increasing the speed of renovation of the keratinocytes. It also takes part in the regulation of the migration of the epidermal cells and it protects the skin against oxidation and the formation of free radicals. It is a moisturizer of molecules that improves the thickness of the epidermis by the selective fattening of the keratinocytes and of the corneal layer that appears to be both finer and more flexible.

- Squalan: This is the saturated form of squalan, a lipid that accounts for 12% of the lipids of the skin. It acts as moisturizer and emollient.

- Bisabolol: This has anti-inflammatory properties and protects the skin from environmental aggressions. It stimulates the scaring processes of the skin. It promotes the dermal action of the active ingredients of cosmetic formulations.

- methylsilanol Hydroxyproline aspartate: A hydrophilic molecule obtained by means of biotechnology, with re-firming and anti stretch mark properties. This has a clear stimulating action on the regeneration process of the epidermis and dermis due to its specific action as a stimulant of the fibroblasts and due to its adding hydroxyproline. It has been experimentally demonstrated to have good capacity for stimulating aged skins, promoting their cellular renovation. In clinical studies, it has also been proven to produce very satisfactory results in the correction of stretch marks due to pregnancy, greater following the birth of the first child than after subsequent children, because in the latter, the stretch marks have been established for longer.

## APPLICATION

Apply the cream, two or three times a day, to the area of the skin with stretch marks and the surrounding areas, using a gentle massaging action, until the product has been absorbed. This cosmetic treatment should be carried out for a least three months.

## PRESENTATION

Tubes of 200 ml

## SOLAR PRODUCTS

### MESOESTETIC® COMPLETE SUN BLOCK WITH MOISTURIZER

#### DESCRIPTION

A cream with a special formulation, which makes it highly protective against UVA and UVB solar radiations.

Designed specifically for its screening effect, which blocks the radiations which are dangerous to very delicate skin (scars,...) or those areas which have been subjected to surgery, chemical peelings or with laser, etc...

The presence in its composition of a moisturizing complex results in a faster recovery from any environmental aggression to the tissue of the skin.

#### INDICATIONS

Cases in which a total protection against the radiations of the sun is required.

Protection of the skin following surgery, to prevent any actinic effects on the scarred areas.

Protection of the skin following peelings, both chemical or laser.

#### COMPOSITION (MAIN INGREDIENTS)

- Physical and chemical solar filters.
- Moisturizing complex.

#### Characteristics

- Tioveil AQN. A physical filter with a hypoallergenic micronized titanium dioxide base. A potent barrier against actinic radiations.
- Parsol MCX, Parsol 5000 (Eusolex 6300), Parsol 1789 and Parsol HS (Eusolex 232). Chemical filters with no systemic absorption. These are markedly lipophilic and hydrophilic, and therefore continuously moisturize the skin.
- Hydroviton. This has a natural moisturizing factor. It is a multi-complex made up of substances that are re-hydrating and retain the moisture of the skin.
- Vitamin E. This is a powerful biological anti-oxidant that protects the cell membranes. It preserves vitamin A and the fatty acids essential to oxidation. It is markedly lipophilic in character, which helps to maintain the moisture of the skin and to protect it against environmental aggressions. It neutralizes free radicals and it therefore prevents premature aging of the skin.
- Glycerine and silicon oil. Moisturizing agents that help to slow down moisture loss through the skin. They are highly hygroscopic and lipophilic. They slow down skin dehydration, while it is exposed to the sun.

## APPLICATION

Spread the cream over the whole of your face and body, half hour before any exposure to the sun.

The skin must be dry and the cream should be carefully spread by means of a gentle massage.

Avoid contact with the mucosa of the eyes.

In the case of prolonged exposure, you are advised to repeat the application every four hours to maintain an optimum level of skin protection

## PRESENTATION

50 ml  
Professional Format 500 ml

SUN PROTECTION SPF 15

## DESCRIPTION

A moisturizing lotion in spray format that incorporates sun filters of medium protection level that permits a suntan and inactivates UVA-UVB radiations. Its composition helps to avoid dehydration and skin aging. It is water-resistant, even when carrying out water or outdoor sports.

## INDICATIONS

Use on all skin types, even delicate skin, whenever it will be exposed outdoors.

## COMPOSITION (MAIN INGREDIENTS)

It combines four molecules that filter UVA and UVB radiation in a balanced manner, and which are present in a concentration that provides an SFP index or sun protection factor with a value of 15.

For functioning of the skin, it contains cosmetic moisturizing agents, anti-oxidants and neutralizers of free radicals

A hydrofugant agent ensures that the formulation remains on the skin over long periods of time.

An acrylic derivate increases the adherence of the formulation to the skin.

Tri peptides and amino acids with skin protecting functions.

## Characteristics

- It has an ultraviolet filtering action: The lotion contains four carefully selected solar filters that cover the UVA and UVB spectrum of radiation. Being lipophilic, it acts as a skin emollient. The system of filters is balanced so as to provide potent anti UVA and anti UVB protection; these have an excellent photo-stability against UV light and give it a protection factor of 15

- Vitamin E: This is a powerful biological anti-oxidant, which preserves the cellular membranes. Due to its being lipophilic, it helps to maintain the moisture in the skin and it protects the skin against environmental aggressions. It neutralizes oxidant-type free radicals and it helps to prevent photo-aging of the skin

- Glycerine and other moisturizers: these keep the skin moist, while reducing the loss of water from the skin

- Silicon derivatives: These complement the "water proof" properties of the formulation due to their hydro-repellence. They act as a protective skin barrier and give the cosmetic a pleasant feel.

- Acrylic copolymer: This gives the formulation its "water proof" effect, because it increases the adherence and duration of the product on the skin, even under adverse conditions such as sweating, bathing, etc.

- Tripeptide 1 & Amino acids: This is a mixture of a synthetic tripeptide and a hydrolyzed tripeptide of vegetable origin. Its action is to neutralize the reactive of the oxygen generated by the poisonous action of ultraviolet radiations and

environmental factors, both of which contribute to the progressive deterioration of the skin and propitiate an accelerated aging of the skin.

- The tripeptide 1 is capable of neutralizing a special type of the reactive agent known as carboxylic reactive. In its make-up are small molecules such as acrolein, glyoxal, malonic aldehyde etc that attack sub-cellular proteins causing their irreversible breakdown (denaturalization), by means of the formation of crossed links (cross linked proteins). These proteins lose their functionality and are an indicator of accelerated skin aging because they appear in photo-aged skin.

- The special hydrolyzed vegetable proteins help to stimulate the processes of cellular repair, by provoking the stimulation of collagen type III synthesis.

## APPLICATION

SUN PROTECTION SPRAY SPF 15 should be generously sprayed over your face and body areas, between 15 and 45 minutes before exposure to the sun, generally 30.

The skin must be dry and the lotion should be spread abundantly using a gentle massaging action.

When it is applied to your face, contact with the eyes must be avoided.

In the case of prolonged exposure outside, the product is recommended to be applied every 4 hours.

The presentation as a spray is useful and convenient; to avoid photo-aggression to scalp, especially there is little hair.

## PRESENTATION

Flask containing 200 ml, with valve for spraying.
